

AT IMMUNO^e WE FOCUS ON YOUR IMMUNE HEALTH

At our clinical practice, we believe that the immune system is directly involved in many of the disease processes. That is why we have made it our mission to conduct research that examines the more important, complex, and compelling issues surrounding the full spectrum of immune-related disorders. At each of our research and clinical sites, we incorporate advanced scientific and academic methods into our practice.

OUR MISSION

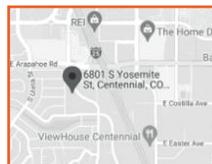

- To provide patients with the finest comprehensive care with an integrated delivery system
- Clinical expertise of providers in a wide range of disciplines
- Highly advanced, cutting-edge research and technologies
- Inflammation has reached epidemic proportions, which is why our focus on the immune system allows us to create critical early intervention strategies
- To practice—and assist in the development of—not only medicine for today but medicine for the future

STUDY DOCTORS ARE TESTING AN INVESTIGATIONAL MEDICATION FOR PEOPLE WITH HSV

- The purpose of this study is to evaluate the safety of the study drug, Pritelivir, for HSV infections in immunocompromised subjects

ABOUT HSV

- Herpes simplex virus infection causes recurring episodes of small, painful, fluid-filled blisters on the skin, mouth, lips (cold sores), eyes, or genitals.
- This very contagious viral infection is spread by direct contact with sores or sometimes contact with an affected area when no sores are present.
- Acyclovir-resistant HSV infections are often seen in immunocompromised patients (eg, patients with HIV infection).
- Resistant isolates result in severe, debilitating mucosal disease, and visceral dissemination.

**BE PART OF THIS
NATIONWIDE CLINICAL STUDY:
YOUR PARTICIPATION
CAN MAKE A DIFFERENCE!**

WHO CAN PARTICIPATE?

- Immunocompromised males and females ages 16 and older

WHAT TO EXPECT:

- 90 day study duration
- 28 day treatment period (or until complete lesion healing is reached)
- 7 total clinic visits (home visits are possible)
- 2 follow up phone call visits
- Study related care and medication are provided at no cost to the subject
- Compensation for time and travel provided

REMEMBER—ASK QUESTIONS!

The study doctor will explain the benefits and risks of being in this research study. Please use this opportunity to ask questions. You may also take this brochure with you and talk to your doctor to help you decide if this research study is right for you.

WHY PARTICIPATE?

- All study-related treatments are at no cost to you
- Access to investigational treatment not currently available on the market
- You may be able to contribute to scientific developments that lead to new treatment options in the future

WHAT IS A CLINICAL RESEARCH TRIAL?

- A “Clinical Trial” is a research study designed to answer specific questions about investigational drugs or new ways of using known treatments.
- Physicians conduct clinical trials according to strict rules set by the Food and Drug Administration (FDA), ethical reviews committees, and the Federal Government.
