

ABOUT US

At IMMUNO^e We Focus On Your Immune Health

At our clinical practice, we believe that the immune system is directly involved in many of the disease processes. That is why we have made it our mission to conduct research that examines the more important, complex, and compelling issues surrounding the full spectrum of immune-related disorders. At each of our research and clinical sites, we incorporate advanced scientific and academic methods into our practice.

Our Mission

- To provide patients with the finest comprehensive care with an integrated delivery system.
- Clinical expertise of providers in a wide range of disciplines.
- Highly advanced, cutting-edge research and technologies.
- Inflammation has reached epidemic proportions, which is why our focus on the immune system allows us to create critical early intervention strategies.
- To practice—and assist in the development of— not only medicine for today but medicine for the future.

The purpose of this study is to evaluate the safety and effectiveness of ASCENIV™, an FDA approved IVIG therapy when given to patients ages 2-11 with Primary Immunodeficiency disease.

About Primary Immunodeficiency Disease

Primary Immunodeficiency Disease is a condition that impairs the immune system and many people with PIDD receive immunoglobulin treatment as a replacement therapy.

Who Can Participate?

- Participants in this trial are boys and girls 2 -11 years of age and are diagnosed with Primary Immunodeficiency Disease.
- Those who participate must have received IGIV therapy maintained at a steady dose for at least 3 months prior to screening.

Remember to ask questions!

The study doctor will explain the benefits and risks of being in this research study. Please use this opportunity to ask questions.

You may also take this brochure with you and talk to your doctor to help you decide if this research study is right for you.

Excellence in Immune Health

Why Participate?

- All study-related treatments are at no cost to you.
- You may be able to contribute to scientific developments that lead to new treatment options in the future.

Who To Expect

- Participants will receive up to 7 infusions over a 5 – 7 month period of time.
- Blood and urine samples will be collected at periodic study visits.
- Total study participation will be 9 months.

What is a Clinical Research Trial?

- A “Clinical Trial” is a research study designed to answer specific questions about investigational drugs or new ways of using known treatments.
- Physicians conduct clinical trials according to strict rules set by the Food and Drug Administration (FDA), ethical reviews committees, and the Federal Government.
